

Competition Corner: Candidate Matrix

g12_u02_w07

Original fictional evidence challenge. No sample analysis, identification, or procedure is implied.

Challenge 21. Build a matrix for File Q and Candidates A, B, and C. Include formula fit, IR relation, signal-label comparison, surviving candidates, and limitations. Explain why the best surviving candidate is not a unique identity.

Challenge 22. Design a decision rule for two candidates that each fit all currently supplied cards. Include what the rule reports, what it refuses to claim, and what one additional fictional card would need to distinguish.
