

Competition Corner: Rate-Model Audit

g12_u03_w10

Original fictional data challenges. No experiment, biological sample, treatment, or health claim is implied.

Challenge 21. Create an audit checklist for a fictional rate-versus-condition graph. Include axes, control, held variables, replicates, variation, trend, causal alternatives, and extrapolation limit.

Challenge 22. Card K shows a lower rate in B than A. Write a two-column response: claims the card supports and claims it does not support. Then state what additional supplied evidence would be relevant to a causal-model comparison.
